Instructions

How to setup your new Bluetooth bulb and app

1. Screw bulb into fitting and turn on at the light switch
2. Enable Bluetooth in your Smart device
3. Download and run the 'Magic Light-BLE' app
4. A list of devices will appear. Select the bulb you wish to control
5. Complete. You will now be able to control the bulb from your smartphone.

Frequently asked questions

1. Which operating systems support this bulb?

   Any IOS device (must be compatible with Bluetooth 4.0 or later).
   Android 4.3 or later

2. What's the furthest distance away I can control this bulb?

   The range on this bulb is 18-30 metres without obstruction.

3. How many bulbs can I control at the same time?

   You can control a maximum of 4 bulbs at a time from your Smart device.

   You can also create different groups of bulbs (I.e. for different rooms) and control these separately.

4. The time function is not working

   Please check that the bulb is turned on at the switch, otherwise the time function will not work.

5. What to do if you lose connection between the bulb and device

   To re-establish a connection between your device and bulb, turn the bulb off at the lightswitch and wait 30 seconds before turning it back on again.

6. My phone is not picking up a signal from the bulb.

   Double-check that Bluetooth is enabled on your device.

   Metal can obstruct the Bluetooth signal, so the device and bulb may not form a strong connection. Keep this in mind when installing the bulb within a metal lantern/lamp.

   Only one Smart device can control the bulb at a time. Make sure only one device is connected to the bulb.
